

BEVPAK series

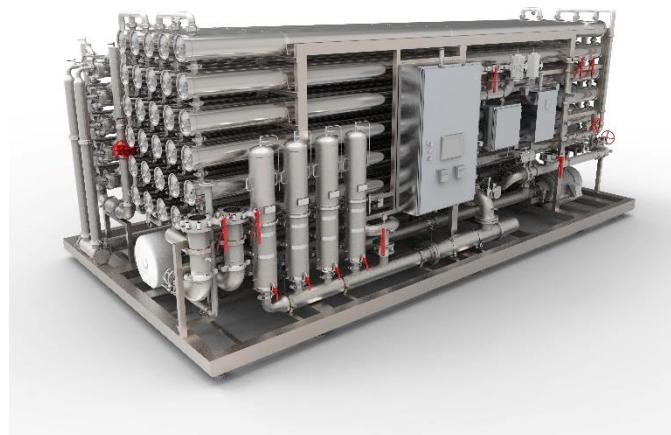

integrated ultrafiltration (UF) & reverse osmosis (RO) membrane systems for ingredient water

features

- SUEZ BEV Pre-engineered UF units are configurable and integrate with pre- and post-treatment options into a full SUEZ Ingredient Water System
- Skid-mounted, compact footprint (30% less) systems reduce onsite installation time and costs
- Integrated UF+RO skid and controls offer a more robust pretreatment from improved operation and run time.
- Stainless Steel construction for durability and suitability in a wet environment
- SUEZ Pressurized ZW700B UF membrane elements with robust SevenBore* hollow fiber technology
- UF pore size of 0.02µm for optimal removal of particulates, bacteria and viruses to maximize runtime on the primary RO
- Turbidity <0.1 NTU
- SDI < 2
- SUEZ BEV Full-fit/Cage Wrap membrane elements for a more sanitary construction and permeate output

configurable options

- RO Bank-by-bank cleaning
- In-line UV sterilizer
- Inlet chlorine monitor
- Interbank pressure transmitters
- Remote monitoring with data trending
- Stainless Steel Air Tubing
- Leveling Feet

documentation included

- Operation and maintenance manual
